## **PARAGRAPH 1**

### **1. What are information systems?**

Information systems are systems that manage, process, and distribute information in various sectors using hardware, software, data, procedures, and people.

### **2. What are the components of information systems?**

The components are hardware, software, data, procedures, and people, which work together to process, store, and distribute information effectively.

### **3. Why are information systems important in modern society?**

They are important because they support decision-making and daily operations across various sectors.

## **PARAGRAPH 2**

### **1. What is Artificial Intelligence (AI)?**

Artificial Intelligence (AI) is the ability of machines to simulate human intelligence, including learning, reasoning, and problem-solving.

### **2. What can AI do in information systems?**

AI can automate tasks, improve accuracy, and enhance efficiency in information systems.

### **3. What example is given about AI's ability?**

AI-powered systems can analyze large datasets quickly, identify patterns, and provide predictions that are difficult for humans to do manually.

## **PARAGRAPH 3**

### **1. In which fields is AI used?**

AI is used in healthcare, business, and education.

### **2. How is AI used in healthcare/business/education?**

- In healthcare, AI helps doctors diagnose diseases and recommend treatments.
- In business, AI is used to understand customer behavior, optimize supply chains, and improve marketing strategies.
- In education, AI personalizes learning based on students' needs and performance.

### **3. What is the main idea of this paragraph?**

The main idea is that AI enhances information systems and is widely used across different industries to improve efficiency and effectiveness.

## PARAGRAPH 4

**1. What are the challenges of AI?**

The challenges include data privacy and security risks, ethical issues in decision-making, and potential job loss due to automation.

**2. Why is data privacy important?**

Data privacy is important because AI systems use large amounts of sensitive information that must be protected from misuse or breaches.

**3. What ethical issues are mentioned?**

The ethical issues involve AI making decisions that can affect people's lives.

## PARAGRAPH 5

**1. What is the conclusion of the passage?**

Information systems and AI are closely connected and will continue to shape the future of technology and society.

**2. What does the author suggest about AI?**

The author suggests that AI should be used responsibly by addressing its challenges and considering ethical issues.

**3. Why is balance important?**

Balance is important to maximize the benefits of AI while minimizing its risks.

## QUESTION

**1. What is the topic of this passage? / What is the passage mainly about?**

The main topic of the passage is the relationship between information systems and artificial intelligence (AI), how their integration has transformed different industries, and the challenges that come with it.

**2. How is the information organized? / How is the passage structured?**

The passage is structured as definition - explanation - examples - challenges - conclusion.

**3. What is the main point? / What is the author's main argument?**

The author's main argument is that the integration of information systems and artificial intelligence brings significant benefits, but it must be managed responsibly to address challenges and ethical issues.

## Part A: Reading Comprehension Questions

**1. What is the main purpose of information systems according to the passage?**

- A. To replace human workers
- B. To manage and process information**
- C. To create artificial intelligence
- D. To reduce technological costs

**2. What does Artificial Intelligence (AI) refer to in the passage?**

- A. The storage of digital data
- B. The communication between systems
- C. The simulation of human intelligence by machines**
- D. The protection of information systems

**3. According to the passage, how does AI benefit organizations?**

- A. By eliminating all human involvement
- B. By increasing errors in data analysis
- C. By automating tasks and improving efficiency**
- D. By reducing the need for information systems

**4. Which of the following is mentioned as an application of AI in healthcare?**

- A. Replacing doctors entirely
- B. Diagnosing diseases and recommending treatments**
- C. Managing hospital finances
- D. Creating educational programs

**5. What challenge is associated with AI integration?**

- A. Lack of technological development
- B. Decrease in data availability
- C. Data privacy and ethical concerns**
- D. Limited use in industries

## Part B: Vocabulary Questions (Context Meaning)

**6. The word “crucial” in paragraph 1 is closest in meaning to:**

- A. Minor
- B. Important**
- C. Optional
- D. Unclear

**7. The word “simulate” in paragraph 2 is closest in meaning to:**

- A. Replace
- B. Imitate**
- C. Destroy
- D. Ignore

**8. The word “enhance” in paragraph 3 is closest in meaning to:**

- A. Improve**
- B. Reduce
- C. Stop
- D. Change

**9. The word “concern” in paragraph 4 is closest in meaning to:**

- A. Solution
- B. Problem**
- C. Advantage
- D. Result

## **Part C: Inference Questions**

**10. What can be inferred about the future of AI and information systems?**

- A. They will no longer be used
- B. They will continue to develop and influence society**
- C. They will completely replace humans
- D. They will only be used in business

**11. Why is ethical consideration important in AI systems?**

- A. Because AI systems are too expensive
- B. Because AI decisions can affect human lives**
- C. Because AI systems are difficult to use
- D. Because AI cannot process data

**12. What is the author’s overall attitude toward AI?**

- A. Completely negative
- B. Completely positive
- C. Balanced (acknowledging benefits and risks)**
- D. Uninterested
